|               | <b>Thursday</b>                                                                                                                                                                                        |
|               | <i>Session 4<br/>Chair: A. Ludmany</i>                                                                                                                                                                 |
| 09:00 – 09:15 | Model and visualization software for the nowcasting of the middle atmosphere<br>T. Egorova, E. Rozanov, N. Hochmuth, A.V. Shapiro, A.I. Shapiro and W. Schmutz                                         |
| 09:15 – 09:30 | New SSI and TSI reconstruction suggests large value of the radiative solar forcing<br>A. I. Shapiro, W. Schmutz, G. Thuillier, E. Rozanov, M. Haberreiter                                              |
| 09:30 – 09:45 | Long-term reconstructions of the Total Solar Irradiance (TSI)<br>L.E.A. Vieira, T. Dudok de Wit, M. Kretzschmar, G. Cessateur                                                                          |
| 09:45 – 10:00 | How is the solar spectral variability in the EUV related to features on the Sun ?<br>T. Dudok de Wit (LPC2E), F. Goryaev (LPI), M. Kretzschmar (LPC2E),<br>J. Lilensten (LPG, J. Aboudarham (OBSPARIS) |
| 10:00 – 10:30 | Discussion                                                                                                                                                                                             |
| 10:30 – 11:00 | Coffee Break                                                                                                                                                                                           |
|               | <i>Session 5<br/>Chair: T. Dudok de Wit</i>                                                                                                                                                            |
| 11:00 – 11:15 | Revisiting sunspot catalogs: data merging and index construction<br>F. Clette, L. Lefévre, T. Baranyi, A. Ludmány                                                                                      |
| 11:15 – 11:30 | Extrapolation of photospheric vector magnetograms: Tests and applications<br>G. Valori, T. Török, B. Kliem, V.S. Titov, L. Green, L. van Driel-Gesztelyi, M. Fuhrmann, D. Baker, A. Wallace, S. Vargas |
| 11:30 – 11:45 | Debrecen sunspot catalogue compilation, the side story<br>Lajos Gyori                                                                                                                                  |
| 11:45 – 12:00 | A prediction for the 24th solar cycle obtained combining various methods<br>R. Brajsa, A. Hanslmeier, A. Ludmany, J. Muraközy, G. Verbanac, H. Wöhl, M. Roth, and L. Svalgaard                         |
| 12:00 – 12:30 | Discussion                                                                                                                                                                                             |
| 12:30         | Closing remarks                                                                                                                                                                                        |
|               |                                                                                                                                                                                                        |
